Recommended Applications:
The compact brazed plate heat exchanger is designed with the focus on the refrigeration area, air conditioning, the HVAC area, solar heating, oil units, heat recovery and other industrial tasks.

Design Principles:
The Sondex type SL23 brazed heat exchanger contains a plate pack and will cover many duties up to 6 m³/h in a single pass solution where all 4 connections can be on one side. This means easy pipe and service work.

The brazed plate heat exchanger, assembled with two end plates and connections, is vacuum brazed at extremely high temperatures providing a permanently sealed heat exchanger. The final result is a strong and compact plate heat exchanger with extremely high heat transmissions. The high heat transmission comes from the main pattern which is designed to create a turbulent flow.

Data required for correct quotation:
Duty, type of product, temperatures, pressure drop and the thermal dynamic properties influence the size of heat surface.

Technical Information:

Standard Materials:
Flow plates and connections in stainless steel.
End plates in stainless steel.
Brazing material is pure copper.

Working Pressure/Temperature:
The unit is constructed for max.
Working pressure/temperature 25 Bar/-20/185°C.

Construction Standard:
According to pressure equipment PED 97/23/EC.

Connections:
½” thread ISO7 BSP/NPT
¾” thread ISO7 BSP/NPT.
22.3 mm pipe for brazing.

Additional Equipment:
Insulation.
Wall mounting.
Connection unions for welding on pipes
In AISI 316 or St. 52-3.
The manufacturer reserves the right to change the specifications in force at any time.
